Cloud App Suite

EnrollXP

(for Business)

Smart **Enroll**ment e**XP**erience

Efficient form creation, publishing, processing and analysis for SMB, services and product companies.

- Create elegant forms using *drag-and-drop* form builder, publish and collect data from your customers, suppliers or public.

- Reduce data input inaccuracies, omissions and errors to almost nil using data validated and logic driven application forms

- Avoid laborious and time-consuming manual review of received forms using easy-to-use data review, filtering, analysis & shortlisting tools

- Reduce typical forms management overheads by 90%. Process data 10x faster than manual process. Cut inefficient, laborious process.

- Go paperless for all interactions with your external parties using EnrollXP. Efficient online collection and analysis of received inputs for **all** kinds of forms. **Go Green.**

3-Step workflow process

- Design customized smart forms
- Publish via email, company website, client facing portals etc.

- Intended recipients fills online forms and submits
- Both parties get auto-notified on email

- Analyze data using EnrollXP build-in tool
- Generate analysis report, graphs or export data for further processing.
- Setup review/approval workflow pipeline to model existing business processes

Salient features

EnrollXP is *essentially* designed with an objective to make academic institutes, small business, service and product entities, *any use-case requiring forms-based data collection* go paperless and efficiently manage/analyze and process collected forms data. Here are some unique features of this online service:

- Cloud hosted service. Any internet enabled device like desktop / laptop / tablet or a smartphone can be used to fill the online forms and use the service

- Easy client access tool to analyse data, sort, filter, short-list and create reports. Export data to CSV/PDF/Excel format for further processing and loading into external systems. Create and publish management summary reports and graphs based on data

- Backend service is hosted on state-of-the- art cloud infrastructure at global datacenters and employ scalable cloud architecture. A typical setup can handle 100s of concurrent applicants, all connected and filling up forms with no visible lag to end user.

- Highly secure system with SSL/PCI compliance, two-factor authentication, DoS/ DDoS protection etc.
